

## How to assemble your Superstrings puzzle

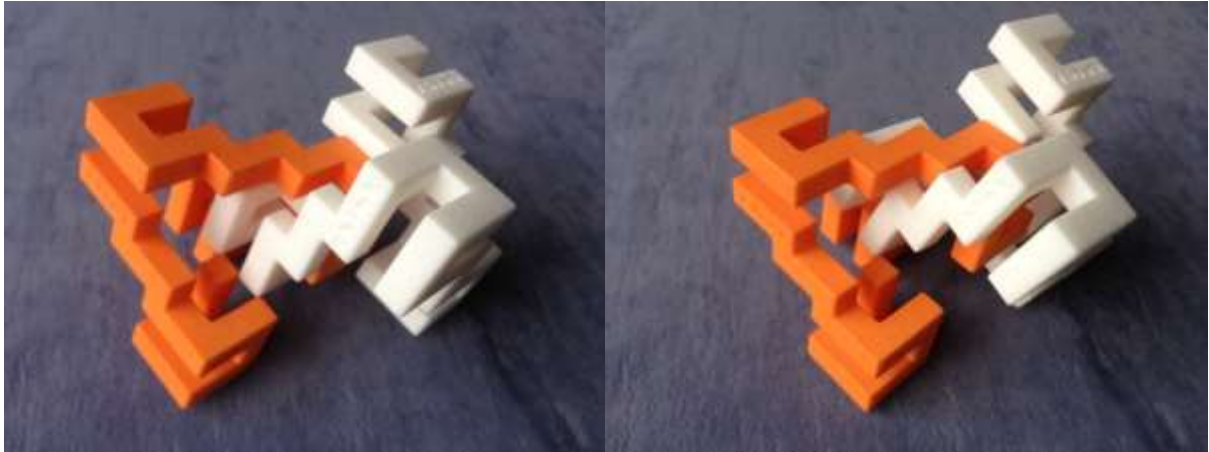

1. Begin with the orange piece on the left with 'clini' facing you in the lower left corner. The white piece on the right has 'think' facing upwards on the far right corner. Keep the orange piece stationary, whilst the white piece moves around it.

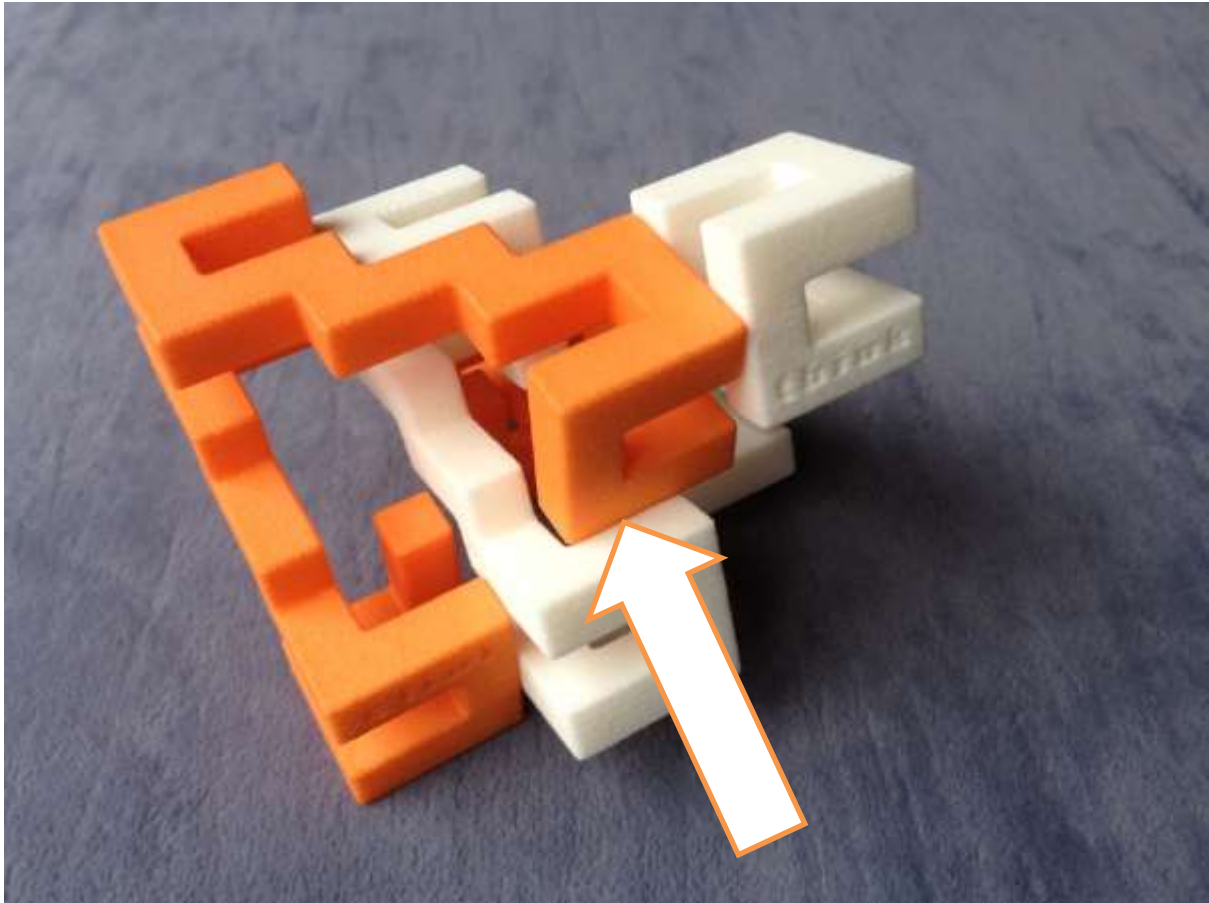

2. Bring the white piece forwards and in front of the orange piece and then slide it backwards.

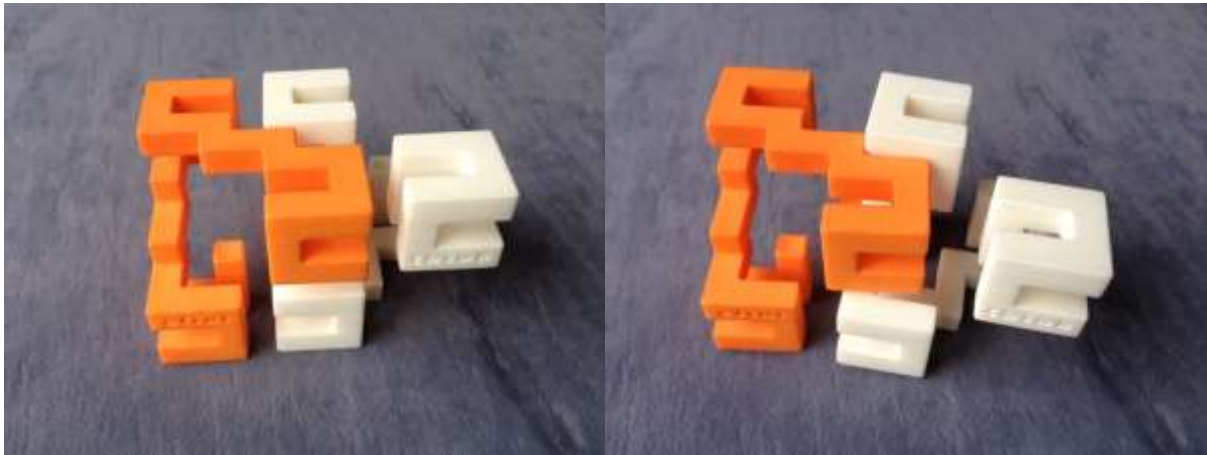

3. Lift the white piece as far as it will go and then slide it backwards. It may need a little wiggle to get it over the vertical orange peg on the right. Start to rotate the white piece towards you.

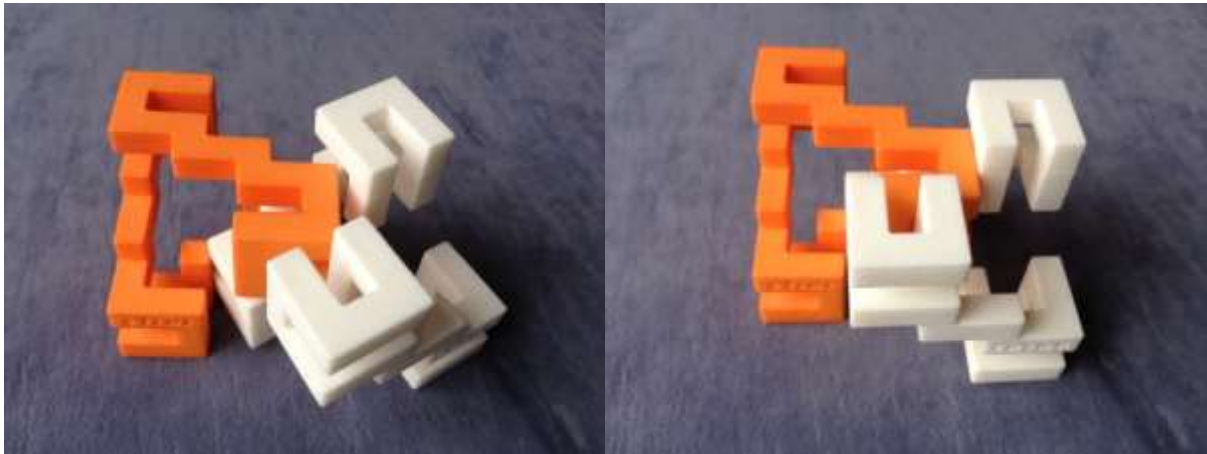

4. This is the trickiest move. The white piece needs to rotate forwards through  $90^\circ$  but will only just fit through the gap in the orange piece. Align the indicated edges exactly to make this move.

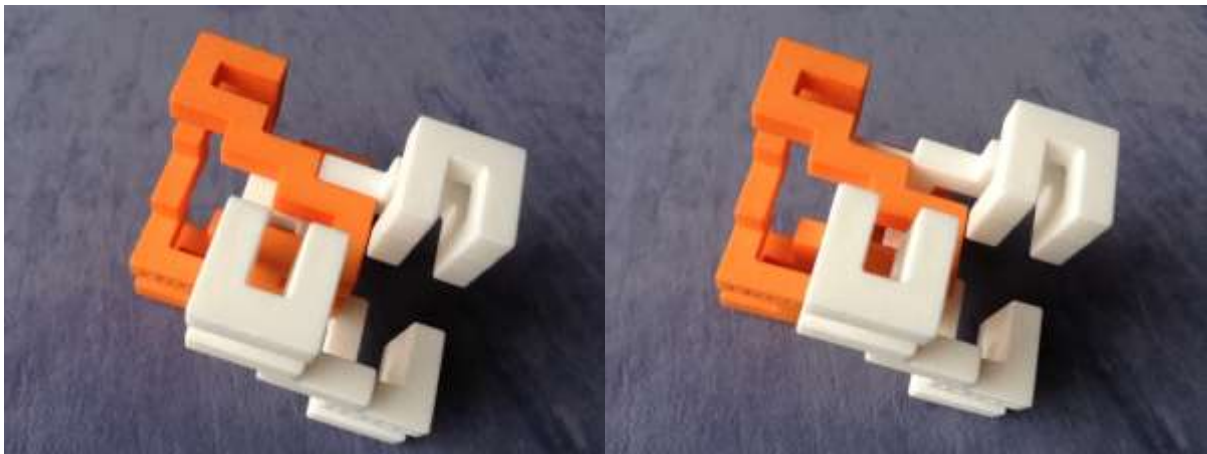

5. The white piece can now move to the right and sit beside the orange piece.

6. Lift the white piece by one unit and rotate it clockwise, viewed from above.

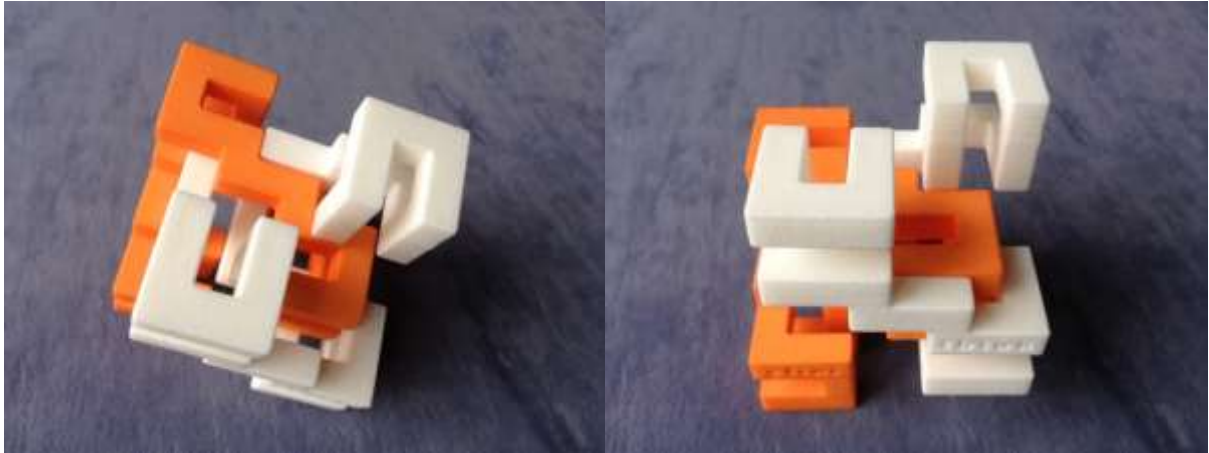

7. Lift the white piece as far as it will go, then slide it back one unit. Again, it may need a little wiggle to get the left hand upper white leg onto the orange piece.

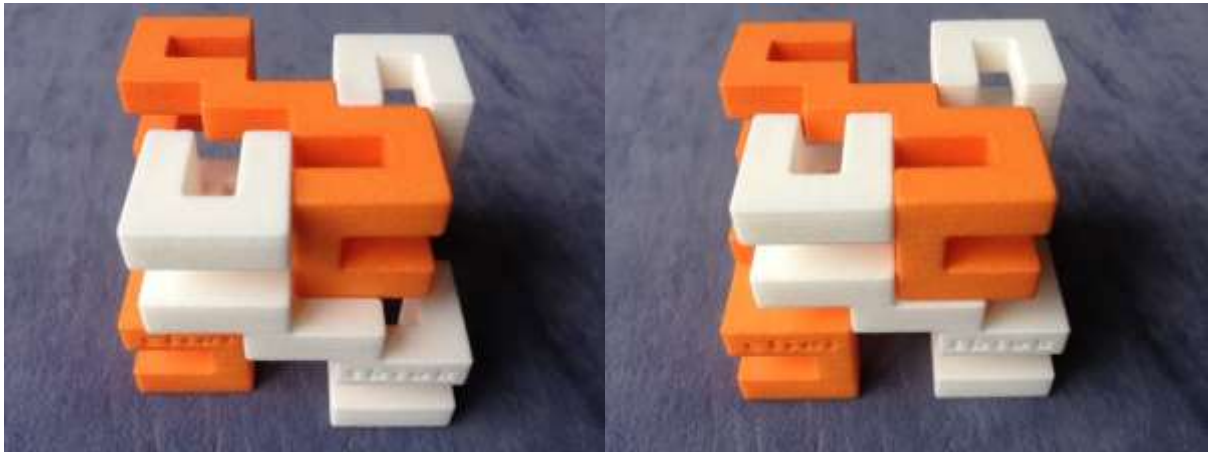

8. Slide the white piece left two units and then back one unit.

9. Now slide the white piece down three units and then back one more.

10. Finally, slide the white piece one unit to the left to complete the assembly.

Disassembling the puzzle can be achieved by reversing the above steps.

Start by positioning the puzzle so that 'clini think' appears across the bottom half and then pinching the front upper and rear lower halves together.
